PART I - Progress Report on Activities

In a short paragraph (3-10 sentences), please describe project activities since your last report.

Science Center educators planned and implemented two Discovery Room programs that were held in October and November. These programs focused on the theme of plants and introduced students to parts of the plants and their functions and all students planted a seed to take home. Three field trips were held at the beginning of October, November and December for 10 students in 4-6 grade. These students went to pre-determined forest plots off of a local hiking trail to collect monthly weather/plant measurements as well as to learn about a variety of methods used to study plants and trees.

Two science center educators participated in a training session with the Imaginarium to learn how to use the recently completed Marine Science programs. The marine science programs will be delivered to the Villages during Outreach Discovery and will be advertised to local teachers during Iceworm in February.

Planning also took place for a January Outreach Discovery Trip to Tatitlek.

Describe any existing or potential problems with the project. If a change in budget or scope of work is required, please explain.
