

Applications invited by September 23

August 11, 2016

The Oil Spill Recovery Institute's policy making Board invites applications for an individual to serve on the Science and Technical Committee (STC). Qualified individuals are specialists in matters relating to oil spill containment and cleanup technology, Arctic and sub-Arctic marine environment, and the living resources and socioeconomics of Prince William Sound and its adjacent waters. Applications of persons with expertise in oil spill removal techniques or education are desired at this time.

Committee members serve three-year terms of office. The STC meets at least once each year for one day in Cordova or Anchorage. The responsibilities of each member include reviewing proposals, attending STC meetings and teleconferences, participating in debates and articulating justifications for opinions and comments in support or dissent of the STC consensus. Members are expected to recuse themselves from opinions where conflicts of interests occur.

The OSRI's mission is to support research, education, and demonstration projects that improve understanding and response to oil spills in the Arctic and sub-Arctic marine environment. The OSRI research plan and information about the research programs funded by the OSRI are posted at its website: www.pws-osri.org

The deadline for applications is Friday, September 23, 2016. To submit an application, send a letter of interest with attached resume detailing the nominee's qualifications to:

W. Scott Pegau
